

# HDR PHOTOGRAPHY CLASS

---

**June 16, 9AM TO 1PM at Photo Experience on Clark Rd., Sarasota, Fl.**

**941-922-1800**

**Instructor: Jim Dohms**

**High-Dynamic-Range Photography has become popular over the past few years. It is being used to allow for a greater range of tones as seen in the “real” world that can be reproduced in print and on monitors.**

**The class will be held at Photo Experience at the Expo Center on Clark Road. Tuition is \$75.00. Jim has been using HDR software for the past four years. His goal is to create images that have a different look than “traditional” photography.**

**Participants will receive an introduction about HDR followed by a one hour student photo session using recommended image capture techniques. The photo session will take place within the studio as well as outdoors on the Expo property.**

**The class will then continue with a demonstration on how the HDR software works using images that were taken during the class. Each student will then practice using the software with some of the images they took earlier in the session.**

**For those interested in taking the class it is important that participants have the following:**

- **Camera with automatic exposure bracketing setting.**
- **Tripod.**
- **Laptop computer.**
- **Card reader**
- **A version of Photomatix HDR software. Photomatix offers a free trial version you can download for this class. The link is [www.hdrsoft.com](http://www.hdrsoft.com)**
- **Those interested should have an intermediate photography skill level and be comfortable using Adobe Elements or other image editing software.**
